October 31, 1955

Dear Josh,

I am having your cultures (w/ 1975, 76, + 77)
lyophilized (Miriam Bonner is doing them) + will send them to
you as soon as I get them.

In the meantime, I thought you'd better
know that, in our hands, 1976 is not a serine auxotroph.
It doesn't grow on minimal - so it's an auxotroph -
but it doesn't grow on serine, or on glycine.

Again, thanks for the cultures.

With best regards,

Topsy Fruton
